Tools – Python, Pyspark

Tasks – Data validation through pyspark implemented in python by creating DataFrames through RDD and CSV datasets and then analyse the data.

QA Engineer (Dec'2021 – June'2022) – @ LIMASOFT India Pvt Ltd, Hyderabad

Project 1: Data Validation test with Python on Web Application

Tools – Python, SQL queries.

Tasks – Validate Database tables with SQL queries implemented in python

Agenda – This project involves to validate the tables data in the backend nothing but testing with python (Socket API, REST API) and majorly implement DML operations through SQL queries (JSON format / directly in python code). All are implemented with large datasets validating over the LIMA applications (SITNEXT, SIT230).

Data Engineer (Aug'2020 – Dec'2021) – @Data & Analytics Services Pvt Ltd., Gurgaon

Project 2: Data preprocess and validation using Python & PySpark

Tools – Python, Pyspark

Agenda – The main concern of this project was to verify the data like Unicode, unstructured and or semi structured data and then pre-process through python with pyspark. In this pyspark module can be able to change the type of the tables column to make good data for further analysis on own application is DAAS Labs.

Project 1: Automation on Web application Functionalities with Selenium, Python

Tools – Python, Selenium, Python

Agenda – Complete frontend UI automation functional, smoke, sanity and regression testing on multiple modules such are ETL, EDA, Build models, Assets etc., using Python and Automation Anywhere tool.

On – Web Application frontend UI functional, smoke, sanity and regression testing on multiple modules such are ETL, EDA, Build models, Assets etc., by manual and then using Python with selenium

ACADEMIC PROJECTS

Web Scrapping with Scrapy including on Non-Selectable Web Pages

- Developed coding on estore website using python, and extracted the data from a web by crawling implemented with it's methods on scraped data.
- Tested the scrapped data with scrapy methodologies such are middlewares of downloader, pipelines, using their hooks for items. "https://www.sapbasiseasy.com/how-to-create-a-new-sap-user/" is a web page not able to select text manually and even inspection as well, so i have considered it as a challenge and extracted the text data using python BeautifulSoup, requests, lxml (for xml, html parser).
